Temporary Street Closure Signage Ordering Guide

Most local sign shops are capable of producing proper directional signage as is required for any temporary street closure within the City of Asheville.

For temporary uses, printing on corrugated plastic board is often a more cost-effective solution than aluminum composite materials.

All signage and traffic control devices used for a temporary street closure must be listed within the event traffic control plan or site map.

For more information on specific regulations and requirements for directional and advisory signage, please visit:

<http://mutcd.fhwa.dot.gov>

For questions relating to the placement of signage or placement of traffic control devices within the event traffic control plan or site map, please contact the **City of Asheville Transportation-Engineering Department at 828-259-5943.**
